Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has established maximum residue limits (MRLs) for fluroxypyr-meptyl on pome fruits (Crop Group 11-09), barley, dry bulb onions, field corn, oats, sorghum, sweet corn and wheat to permit the import and sale of foods containing such residues.

Fluroxypyr-meptyl is an herbicide currently registered for food use in Canada on spring barley and wheat.

Corresponding MRLs for fluroxypyr-meptyl were proposed in the consultation document published on 22 March 2011, Proposed Maximum Residue Limit PMRL2011-04, *Fluroxypyr-meptyl*. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs for fluroxypyr-meptyl take legal effect in Canada as of the publication date of this document.

Established Maximum Residue Limits for Fluroxypyr-meptyl

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Fluroxypyr-meptyl	1-methylheptyl [(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy] acetate, including the metabolite [(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]acetic acid	0.5	Barley, oats, wheat
		0.03	Dry bulb onions
		0.02	Pome fruits (Crop Group 11-09), field corn, sorghum, sweet corn kernels plus cob with husks removed

MRLs are established for each commodity included in the pome fruits crop group in accordance with the Residue Chemistry Crop Groups webpage in the Pesticides and Pest Management section of Health Canada's website.

A complete list of all pesticide MRLs established in Canada can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
